projects

Attendance System Post Covid

This project is used to make a note of every individual entering into an environment and also to record his/her temperature. In this proposed system, every individual's attendance is punched using face recoginition with temperature record using IR thermometer (contact-less). An alert would be sent to monitoring device for sick individual.

Vehicle tracking with smart SOSmart speeding alert

This project is to develop a smart vehicle system mobile application. The system recognizes car speed using GPS of our cell phones and sends an alert with your location to your pre-selected emergency contacts in case of any crash or accident, thus permitting our contacts to send help at the earliest opportunity.

Operating system

Ubuntu 20.04, Windows 7/8/10
